

COSC2430 Hw8: Resubmission of your previous homework

1. Introduction

You need to resubmit one of your previous homework. The grade of the correspond homework will be updated with the new grade.

2. Operation

1). You need to create a folder and name it with the original name of the homework followed by “-resubmit”.

For example, if you want to resubmit homework 7, your folder name should be “hw7-resubmit” (no space between them)

2). Upload your source code to the folder.

3. How to grade

The script will grade your homework sequentially, whenever it found a folder with the “resubmit”, it will start grading it, then stop finding any more folders. So, if you submit more than one homework, it will only grade the one with the smallest number.

4. Q&A

1) What if my resubmission is lower than the original?

The higher grade will be kept.

2) My previous homework is all 100, do I need to resubmit?

No, the resubmission will only update the previous grade, if you

don't want to update any one, you can just ignore this homework.

3) How many times will this homework be graded?

The homework 8 will only be graded once. So, you should only update the homework which will increase your grade most.
